EXCELSIOR pür

Precision-Crafted for Ultimate Performance.

Premium Stainless Steel Hoses for Steam Dryer

Top quality stainless steel hoses and Y connector with exclusive 5 year warranty*
Burst proof design
3/4" hose connections
Corrosion resistant
Certified and tested

Installing Your Hoses

What You Will Need

1 Set of Color-Coded Excelsior Pür™ Premium Washing Machine Hoses: red for hot water and blue for cold water

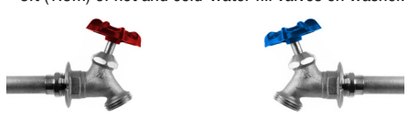
1 Set of Excelsior Pür™ Hoses for Steam Dryers; 12-inch inlet adapter hose and 6-foot hose

8 Flat Washers (included)

1 Y-Connector (included)

1 Adjustable Plier

Hot and Cold-Water Faucets should be located within 5ft (1.5m) of hot and cold-water fill valves on washer.



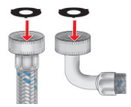
INSTALLATION

IMPORTANT: *for indoor use only. Do not over-tighten couplings or use tape or sealants on valve when attaching to faucets or washer, as damage can result.*

Follow the steps below to connect the water to your new washer:

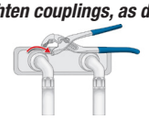
1) Ensure your water source is turned off before beginning.

2) Insert a flat washer into each end of the hoses. Check that washers are firmly seated in couplings.



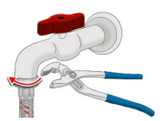
3) Using the hoses provided from the Excelsior Pür™ Premium Washing Machine Hoses, attach the 90˚ elbow end of the cold water (blue) hose to the cold-water inlet valve on the back of the machine; then the hot water (red) hose to the hot water inlet valve.

4) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***



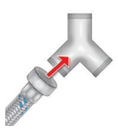
5) Attach the opposite end of the hot water (red) hose to the hot water faucet.

6) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***

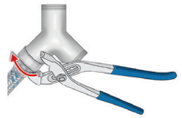


7) Attach the opposite end of the cold water (blue) hose to one of the two splits in the Y-connector.

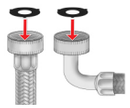
*If your washer is part of a set, which is not stacked, then consider the following: If the washer is on the **left**, connect the hose to the **left** split. If the washer is on the **right**, connect the hose to the **right** split.*



8) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***

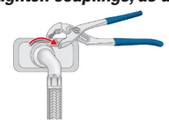


9) Insert a flat washer into each end of the steam dryer hoses. Check that washers are firmly seated in couplings.



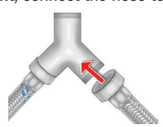
10) Using the 6-foot hose provided in the Excelsior Pür™ Hoses for Steam Dryers, attach the 90˚ elbow end to the inlet valve on the back of the dryer machine.

11) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***

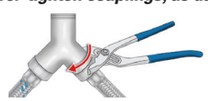


12) Attach the opposite end of the 6-foot Steam Kit hose to the second split in the Y-connector.

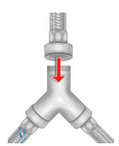
*If your washer is part of a set, which is not stacked, then consider the following: If the washer is on the **left**, connect the hose to the **left** split. If the washer is on the **right**, connect the hose to the **right** split.*



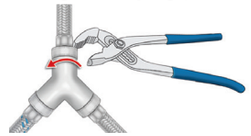
13) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***

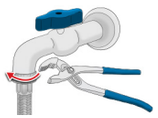


14) Using the 12-inch inlet adapter hose provided in the Excelsior Pür™ Hoses for Steam Dryers, attach one end to the remaining opening in the Y-connector.



15) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***



16) Attach the opposite end of the 12-inch inlet adapter hose to the cold-water faucet.


17) Hand tighten couplings, then use pliers to make an additional 1/4" turn clockwise. ***Do not over-tighten couplings, as damage can result.***
